

China Supplier Review Pack for Data Center Liquid Cooling Components

NovaGrid Infra helps buyers review selected China-based supplier options for data center liquid cooling components. We focus on requirement review, supplier document collection, sample-first coordination, and export communication for qualified RFQs.

Liquid cooling valves Ball valves, check valves, diaphragm valves, butterfly valves, pneumatic or electric actuated valves.	Stainless fittings Threaded, welded, clamped, sanitary-style, and pipe fitting options for cooling-loop review.
Flow-control parts Valve assemblies, flow-control accessories, and supplier document review for project-specific requirements.	Cooling-loop components CDU-related flow-control parts, rack manifold-related parts, cooling loop valves, and sample-stage components.

Supplier review support

1. Requirement review Component category, application, material, connection type, target dimensions, and project context.	2. Datasheet and drawing collection Supplier datasheets, drawings, available test records, material notes, and packaging details.	3. Technical ch Material, size, p type, and stated
4. Sample-first path Sample quantity, lead-time expectation, supplier communication, and qualification before larger orders.	5. Export communication Export packing, destination-country coordination, labeling questions, and document communication.	6. Buyer-con Final engineerin and purchasing

RFQ checklist

- Component category
- Application: CDU / rack manifold / cooling loop / precision cooling / other
- Material requirement
- Connection type
- Size / DN / thread / clamp / weld standard
- Pressure / temperature
- Coolant or fluid type
- Required standards
- Sample quantity
- Destination country
- Business email

What NovaGrid does not claim

NovaGrid is an independent sourcing and supplier qualification support partner. We do not claim to manufacture every listed component, do not use unauthorized supplier logos or customer case studies, and do not guarantee certification, price, or lead time without supplier-confirmed documents. Buyers keep final responsibility for engineering approval, certification review, local compliance, and purchasing decisions.

Start with one component requirement.
Send a drawing, datasheet, part number, or short description. NovaGrid will review whether it fits the sourcing scope before supplier outreach.
